Agenda

- ❖ **Background and Objectives**
- ❖ **Oxygen Mask Design Methodology**
 - **Face-Mask Interface Analysis**
 - **OM Design Strategy Development**
 - **OM Design Based on Virtual Fit Testing**
 - **Evaluation of Revised Oxygen Mask**
- ❖ **Discussion**

Research Motivation

- Pilot oxygen mask which is designed based on US Air Force face data does **not fit to Korean pilots**
- Excessive **pressure** or oxygen **leaking** at nose (ROK Air Force, 2006)
⇒ cause pain and highly stressed situation

US Air Force
face anthropometric data
(Churchill et al., 1977)

MBU-20/P oxygen mask
for F-15, F-16 fighter
(Gentex corporation, USA)

Excessive pressure
for Korean pilots' nose
(illustrated)

General Differences Between Koreans and US Pilots

- Required comparison between Korean and US pilots' facial characteristics to figure out the reason of unfitness of current mask to Korean pilots
- But, **no facial anthropometric data of Korean pilots**
- *cf.* Korean civilians' face is shorter (5.7 ~ 9.5 mm) and wider (1.8 ~ 3.8 mm) than US Pilots

Comparison between Korean Civilians and US Pilots (age: 25 ~ 50, male)

no	face dimension	Korean civilians (Size Korea, 2004)		US pilots (Churchill et al., 1977)	mean difference (KC – USP)
1	face length	110.8	<	120.3	-9.5
2	lower face length	63.3	<	69.0	-5.7
3	face width (bitracion breadth)	144.3	>	142.5	1.8
4	nose width	39.2	>	35.4	3.8

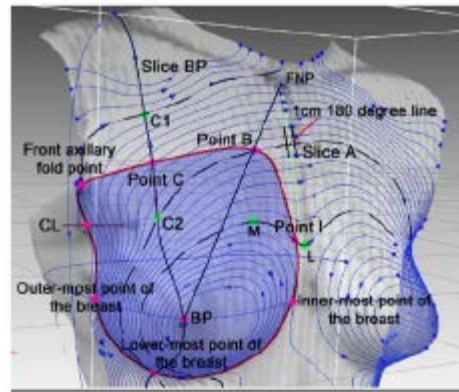

(unit: mm)

Product Design based on 3D Human Scan Data

- **Wearable products** (e.g., cloths, shoes, helmets, masks) requires well-fitness
- Wearable products have designed based on **body size and shape**

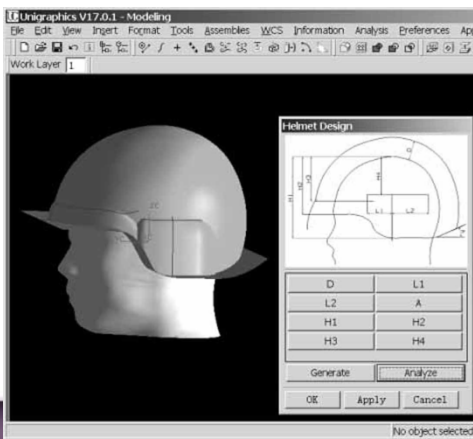

Clothing pattern design based on 3D human body (Park & Lee, 2012, etc.)

Innerwear design based on 3D scan data (Lee and Hong, 2007; Zheng et al., 2007)

Shoes customization based on 3D foot data (Lochner, 2009; Rout, 2010)

Helmet design based on 3D head (Liu et al., 2008)

Dustproof mask based on Korean face size and shape (Han et al., 2003, 2004)

Research Objectives

Design an Korean Pilot Oxygen Mask based on Virtual Fit Testing

- 1. Measurement of Korean pilots' face**
⇒ figure out **differences between Korean and US pilots' face**
- 2. Development of a **mask design method** based on 3D face scan data, mask wearing characteristics, and users' preferences**
⇒ systematically design the mask considering **face-mask interface**
- 3. Development of a **method for virtual mask fitting** on 3D face**
⇒ virtually **test a fitness of a revised mask** on the early stage of design
- 4. Evaluation of a revised mask prototype with Korean pilots**
⇒ validate proposed mask design method

Pilot Oxygen Mask (MBU-20/P)

- MBU-20/P: oxygen mask for F-15 and F-16 fighter
- **Half-face mask**: covers nasal and oral part (*cf.* full-face mask)
- Supply **oxygen** on high altitude, high gravity, ejection, and ditching situation
- Support **communication**
- Size: extra small narrow (XSN), small narrow (SN), **medium narrow (MN)**
medium wide (MW), large wide (LW) **design object of this study**

Components of Pilot Oxygen Mask

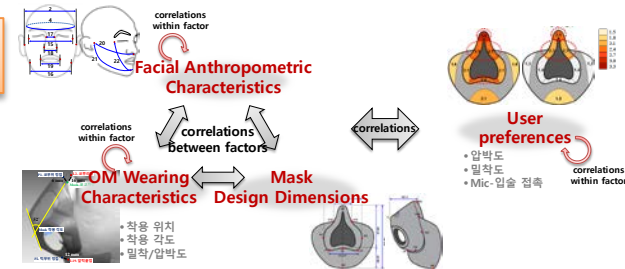

- Facepiece: preventing oxygen leaking (material: silicone rubber)
- Hardshell: preventing shape distortion of facepiece (material: polysulfone)

Oxygen Mask Design Process

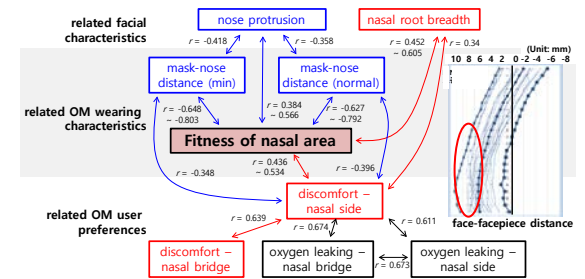

S1 Face-Mask Interface Analysis

- Facial characteristics
- OM wearing characteristics
- OM design dimensions
- OM user preferences

S2 OM Design Strategy Development

- Correlation analysis
- Technical model development
- Design directions determination

S3 OM Design Based on Virtual Fit Testing

- Virtual fit testing method development
- Design revision values determination
- OM design revision
- Design effect analysis & iterative design

S4 Evaluation of Revised Oxygen Mask

- Virtual fit testing
- Ergonomic experiment

Preferred/non-preferred design criteria

Design revision strategy & design improvement

FMI Factor: Facial Anthropometric Characteristics

correlations within factor

Facial Anthropometric Characteristics

correlations within factor

User preferences

- Discomfort
 - Oxygen leaking
 - Mic-lip clearance
- correlations within factor

OM Wearing Characteristics ↔ Mask Design Dimensions

- Wear position
- Wear angle
- Fitness

Measurement Dimensions

(정정림 외, 2011)

- Reviewed **15 previous studies** related to facial anthropometry or oxygen mask design
- Comprehensively gathered **109 head & facial dimensions**
- Selected 22 facial dimensions** related to half-face mask design (length: 11, width: 7, circumference: 4)

Face dimension	Importance
1 head height	L
2 head breadth	L
3 head length	L
4 head circumference	L
5 face length	H
6 lower face length	M
7 sellion-bottom lip length	M
8 bottom lip-menton length	L
9 nasal bridge-menton length	M
10 nasal bridge-chin length	H
11 chin-menton length	L
12 nose length	M
13 nose protrusion	L
14 face width	L
15 chin width	L
16 nasal root breadth	H
17 maximum nasal bridge breadth	H
18 nose width	H
19 lip width	H
20 bitracion-menton arc	L
21 bitracion-subnasal arc	L
22 bizygomatic-menton arc	L

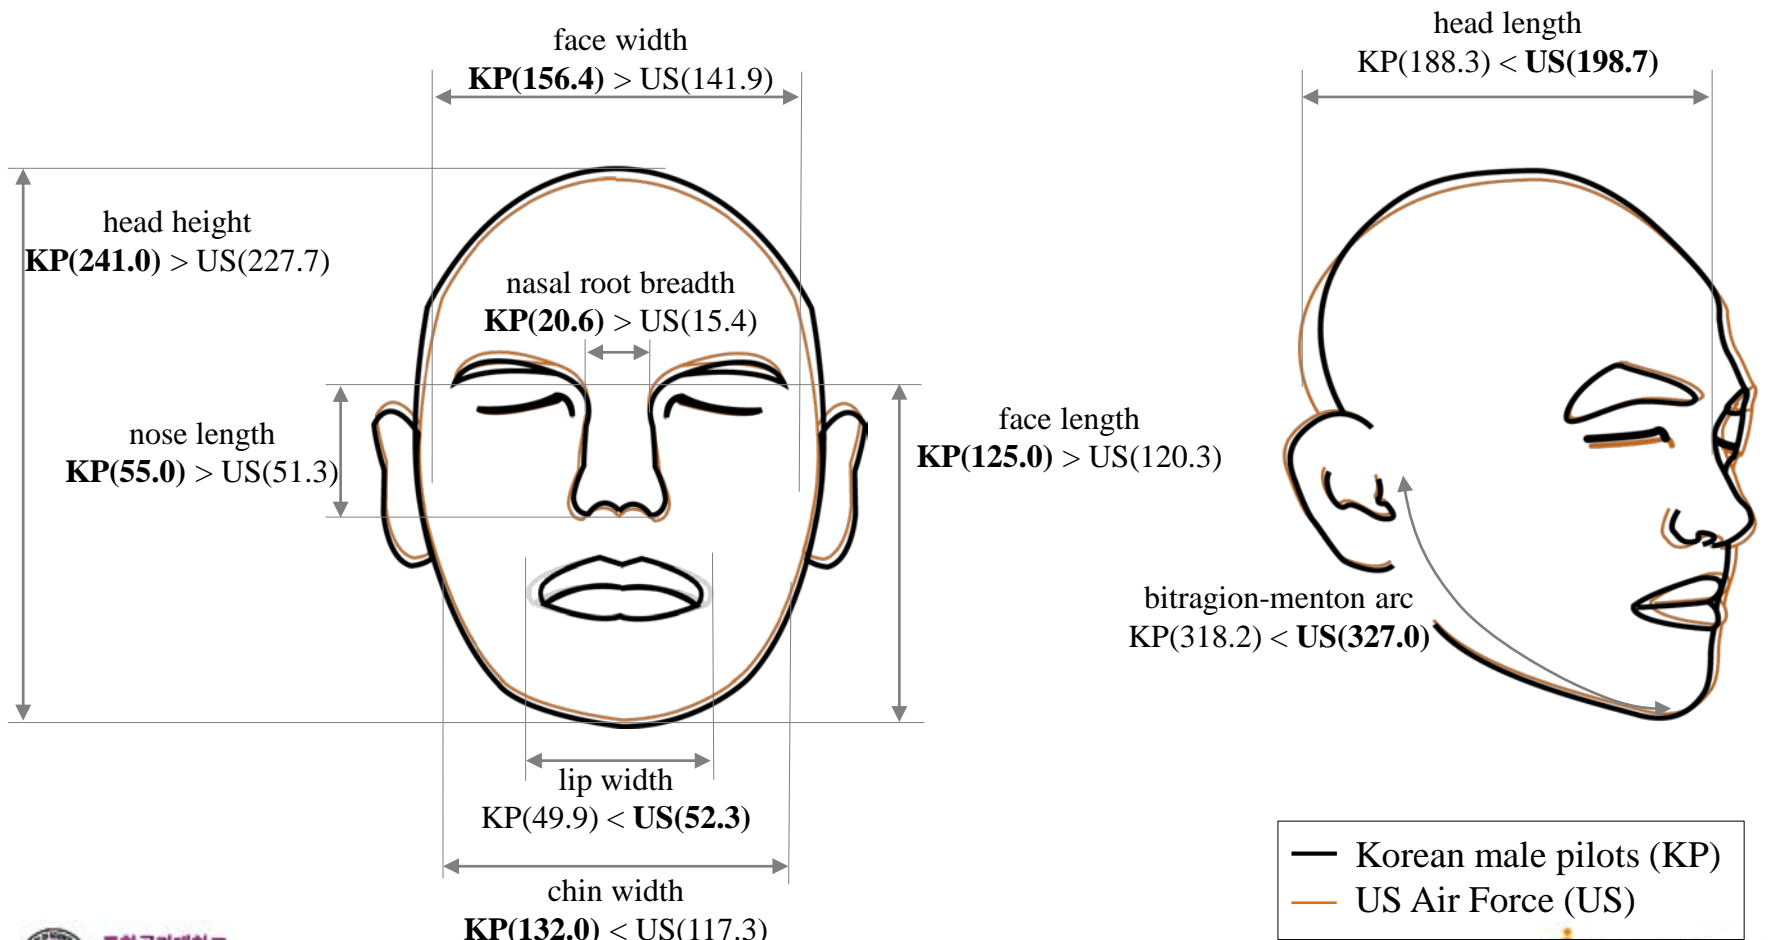

Facial Measurement Survey

- **Participants**
 - ✓ 278 male pilots
 - ✓ 6 female pilots and 52 female Air Force Academy cadets
- **Survey period: Dec. 2010 ~ Feb. 2011**
- **Measurement method: direct measurement & 3D measurement**

Korean Pilots vs. US Pilots

- In general, Korean pilots' face is **longer** and **wider** than US pilots on average
- **nasal root breadth**: Korean pilots (20.6 mm) > US pilots (15.4 mm) ($p < 0.05$)

FMI Factor: Oxygen Mask Wearing Characteristics

Analysis Method

(이원섭 외, 2011)

- Gather photos of mask wearing (print on transparent film)
- Alignment of face and mask on display using 3D face & mask scan data
- References for alignment
 - ✓ face features (e.g., shape nose and eyes)
 - ✓ feature points on mask
- Reliability evaluation: inter- & intra-experimenter variability < 2 mm ($n = 3$)

(Weinberg et al., 2005)

Alignment face & mask on 3D
(3D face scan data & mask CAD)

Result of alignment

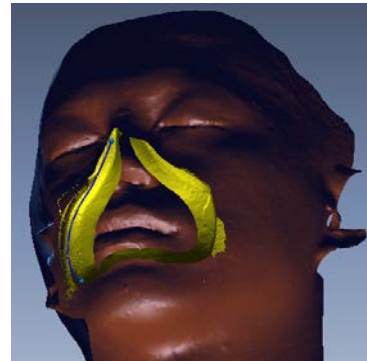

Mask Wearing Characteristics

- (1) wear position, (2) wear angle, (3) clearance (e.g., microphone-lip)
- (4) fitness (distance between face & facepiece)

mask position at nose

mask position at chin

Penetration of facepiece into face (back view)

Face-facepiece distance = fitness

Fitness (mm)

10 8 6 4 2 0 -2 -4 -6 -8

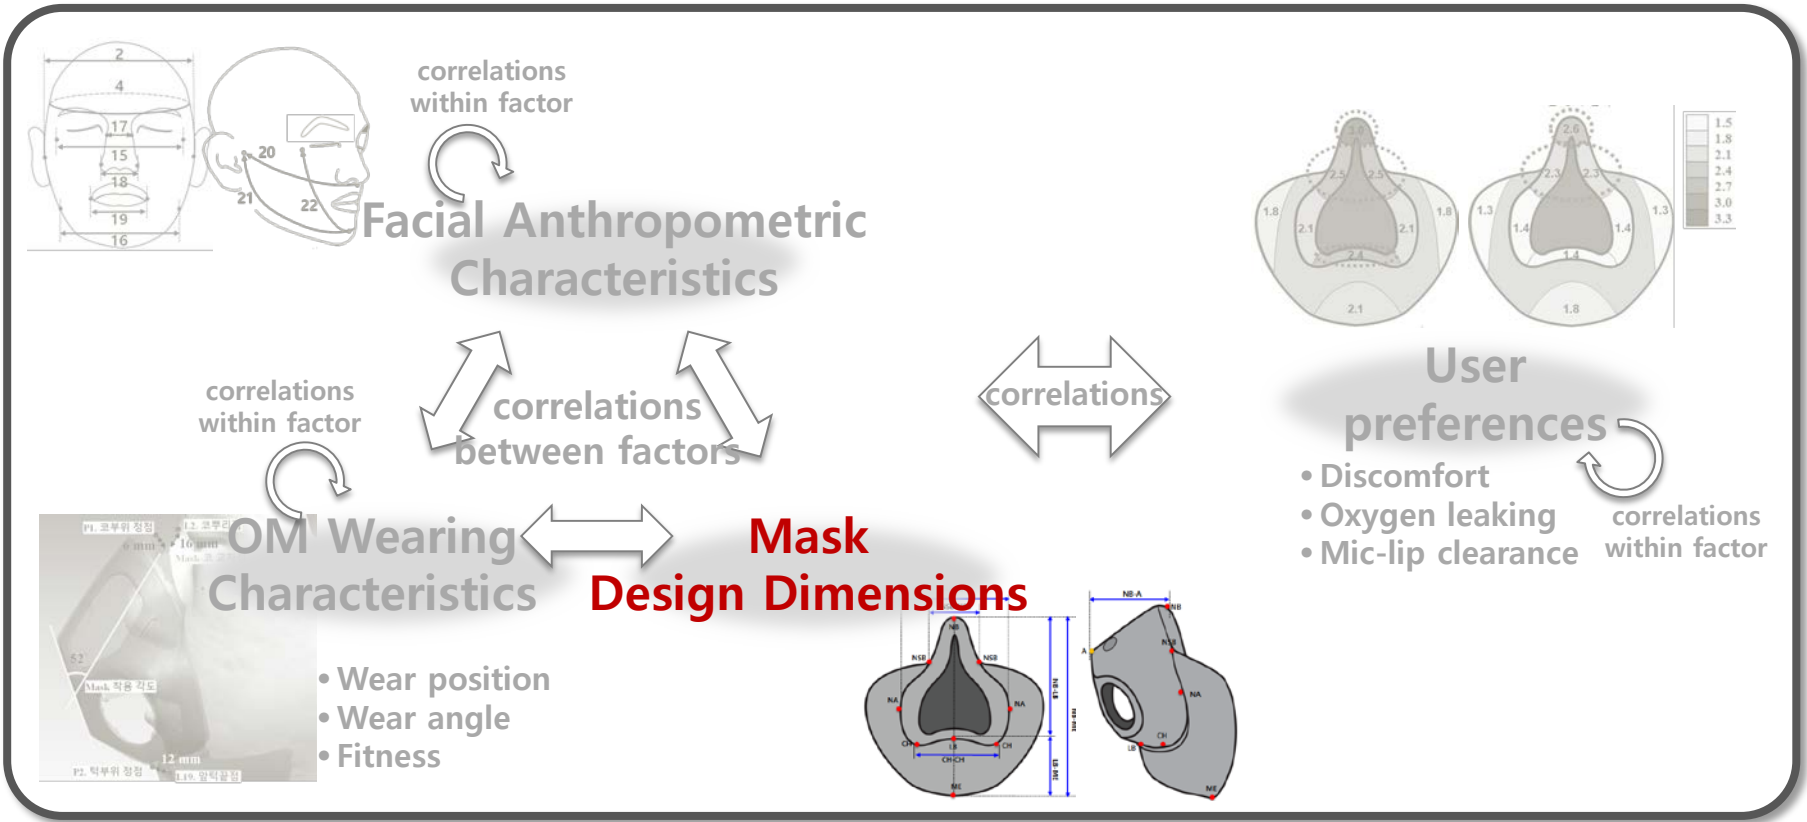

No contact = oxygen leaking

Deep contacted = high pressure

face-facepiece distance

FMI Factor: Oxygen Mask Design Dimensions

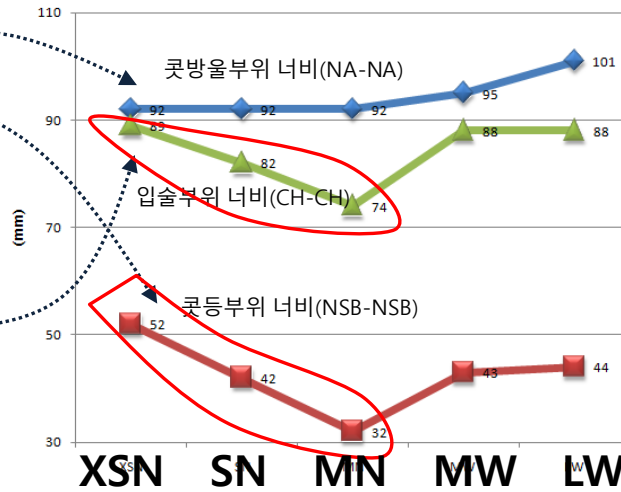

Method & Results (Illustrated)

- Measurement of facepieces and hardshells using 3D digitizer (5 sizes)

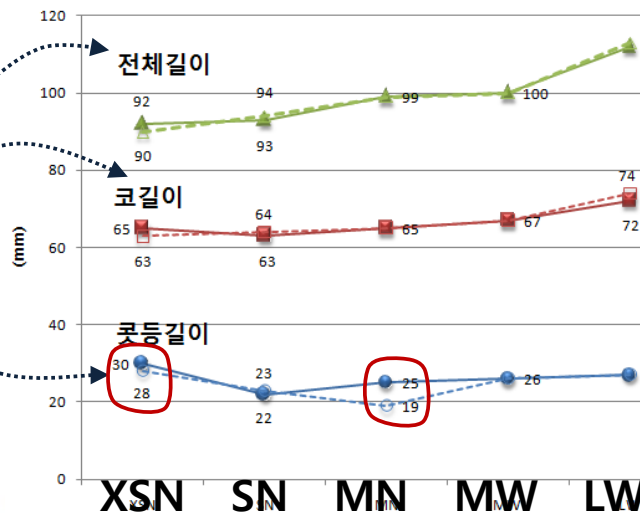

(Immersion MicroScribe® 3D Digitizer, Revware Inc., USA)

facepiece

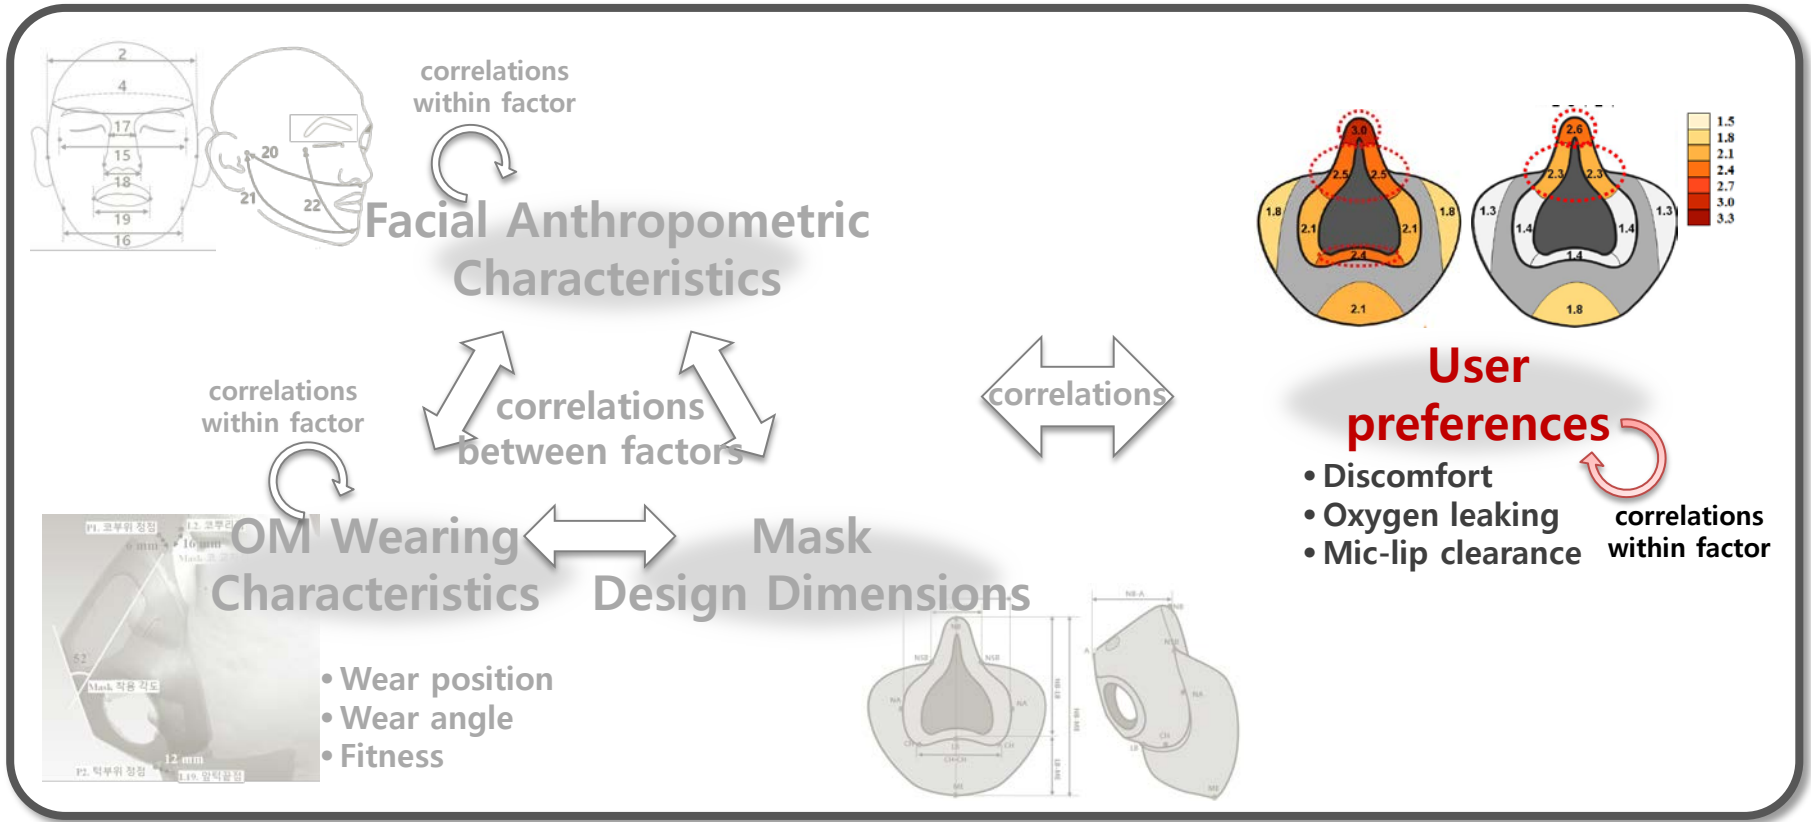

hardshell

현행 산소마스크는 일부 측정항목에서 마스크 size 증가에 따른 측정 부위별 크기 증가 양상을 보이지 않음
 ⇒ 산소마스크 설계 개선 시 마스크 size 간의 설계 합리성 고려 필요

FMI Factor: Oxygen Mask User Preferences

Information of User Preferences Survey

- Survey period: 2010. 12 ~ 2011. 02
- Participants: around 500 military pilots
- Survey method: interview & intranet
- Example of questionnaire

II. 산소 Mask 적합성 평가

II-1. 착용 안락감 (comfort)

1. 아래 그림을 참고하여 산소 mask 각 부위별 압박에 따른 불편감에 대해 표시해 주세요.

부 위	불편 없음 (comfortable)	조금 불편 (slightly uncomfortable)	불편 (moderately uncomfortable)	대우 불편 (very uncomfortable)	극히 불편 (hot spot)
A: 코대	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
B: 코 옆	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
C: 뺨	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
D: 광대뼈-코 사이	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
E: 입술 밑	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F: 턱	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

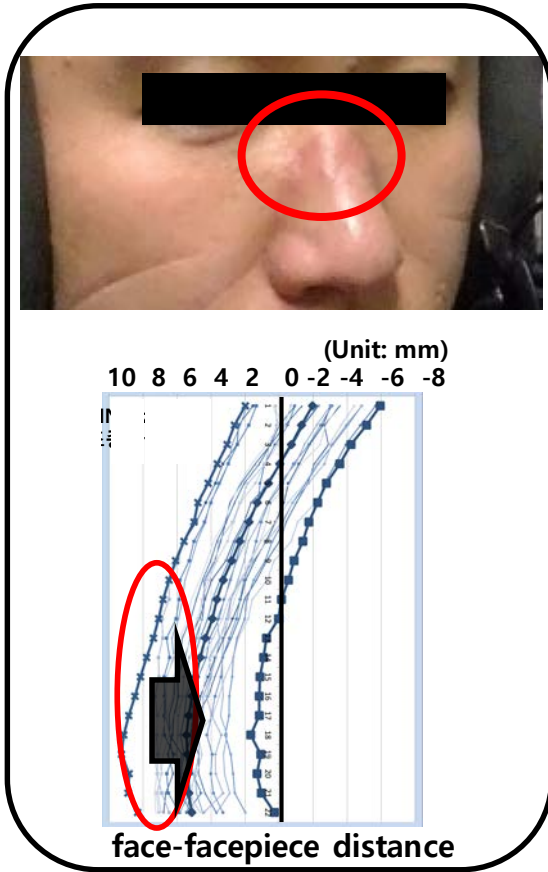

Results

- Highly uncomfortable on nasal part
- Microphone is contacted to lip on half of pilots (53%)

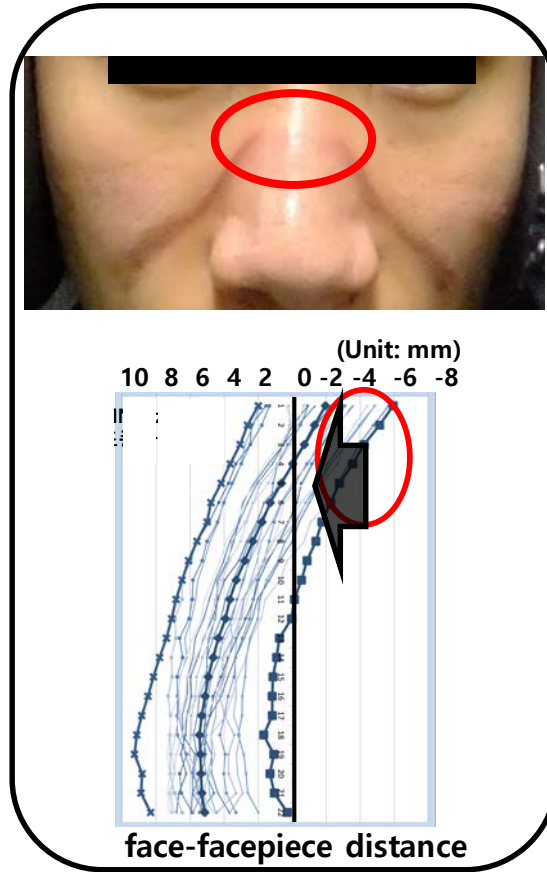

Microphone-lip contact

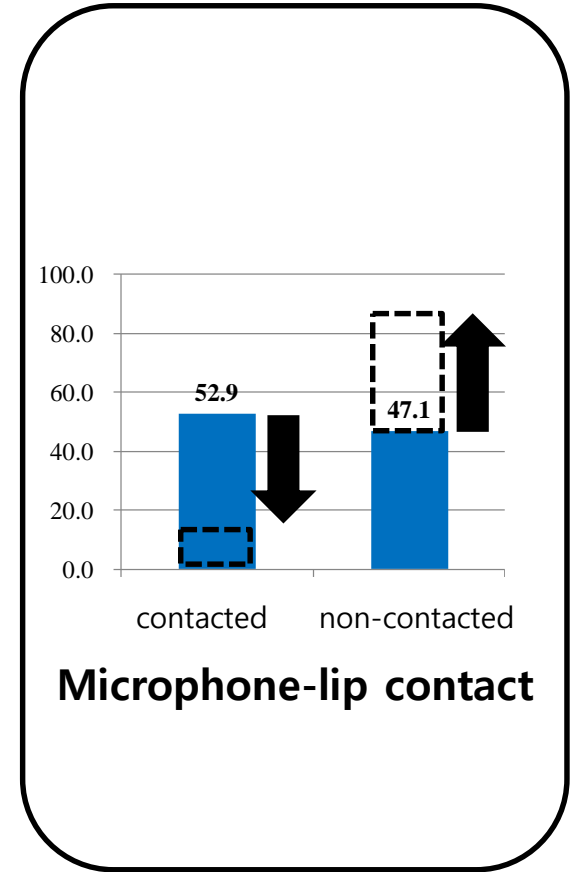

Needs of Design Improvement

prevent high pressure
on nasal area

prevent oxygen leaking
on nasal area

prevent microphone-lip
contact

S2. OM Design Strategy Development

S1 Face-Mask Interface Analysis

- Facial characteristics
- OM wearing characteristics
- OM design dimensions
- OM user preferences

S2 OM Design Strategy Development

- Correlation analysis
- Technical model development
- Design directions determination

S3 OM Design Based on Virtual Fit Testing

- Virtual fit testing method development
- Design revision values determination
- OM design revision
- Design effect analysis & iterative design

S4 Evaluation of Revised Oxygen Mask

- Virtual fit testing
- Ergonomic experiment

표 1-1 마스크 착용 실험 결과

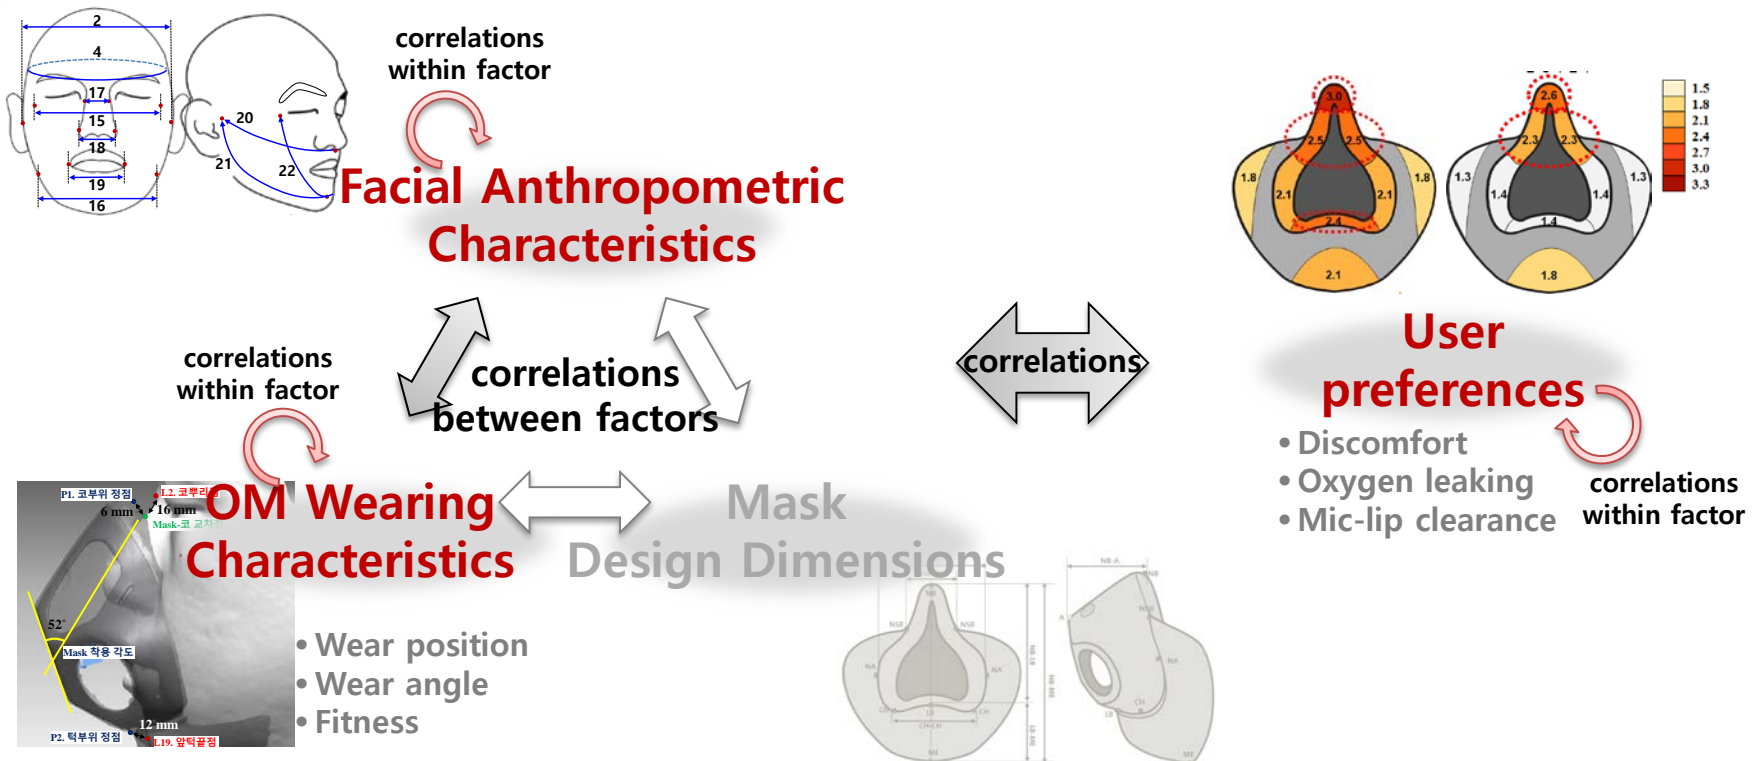

1. 마스크 착용 실험 결과 (단위: mm)

구분	측정 항목	실험 1	실험 2	실험 3	실험 4	실험 5
1. 마스크 착용 실험 결과	마스크-코 거리 (min)	10	8	6	4	2
	마스크-코 거리 (normal)	10	8	6	4	2
2. 마스크 착용 실험 결과 (단위: mm)	코-코골리 거리	10	8	6	4	2
	코-코골리 거리	10	8	6	4	2

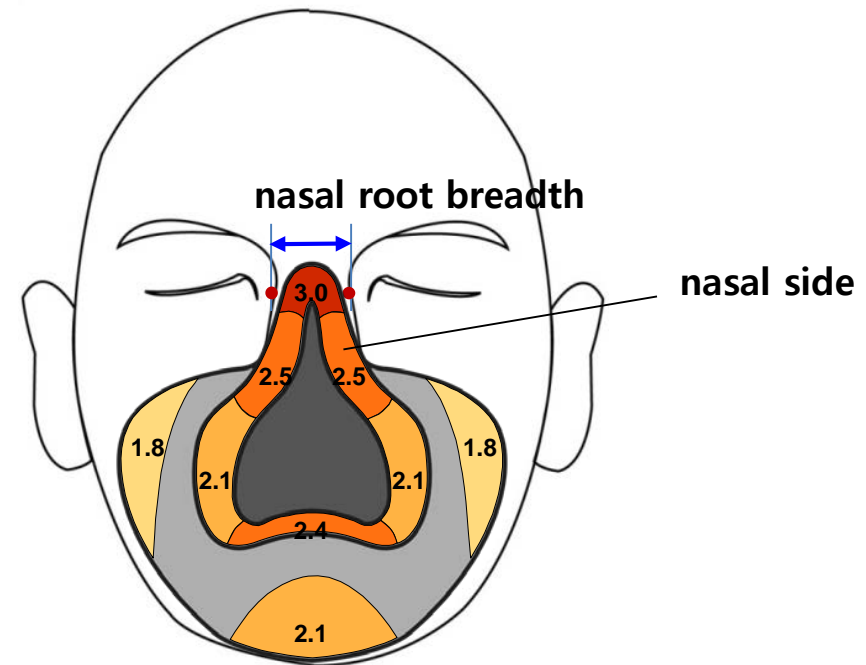

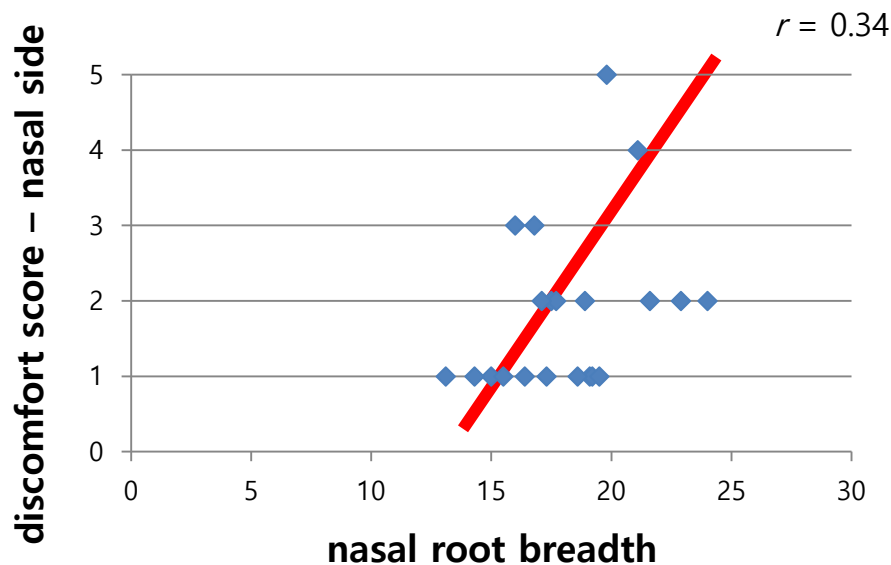

Correlation Analysis Between and Within FMI Factors

- Facial characteristics × OM wearing characteristics × OM user preferences (2775 items)
- Mask design dimension: constant for MN size
- **Selected 57 items** highly related to OM design

Results of Correlation Analysis (Illustrated)

- Nasal root breadth ↑ than discomfort score of nasal side ↑
- Required design revision on breadth of nose part of oxygen mask
- *cf.* Nasal root breadth of Korean pilots (20.6 mm) > US pilots (15.4 mm)

Development of Technical Models (Illustrated)

- Overall relationship between FMI factors about fitness of nasal area

S3. OM Design Based on Virtual Fit Testing

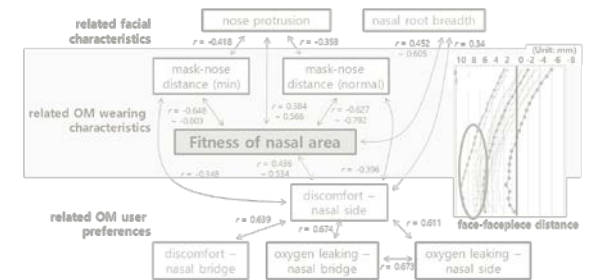

S1 Face-Mask Interface Analysis

- Facial characteristics
- OM wearing characteristics
- OM design dimensions
- OM user preferences

S2 OM Design Strategy Development

- Correlation analysis
- Technical model development
- Design directions determination

S3 OM Design Based on Virtual Fit Testing

- Virtual fit testing method development
- Design revision values determination
- OM design revision
- Design effect analysis & iterative design

S4 Evaluation of Revised Oxygen Mask

- Virtual fit testing
- Ergonomic experiment

The table shows evaluation results for the revised oxygen mask. It includes a diagram of the mask and a table with columns for 'W', 'H', 'D', 'L', 'R', 'F', 'B', 'T', 'C', 'S', 'M', 'N', 'O', 'P', 'Q', 'R', 'S', 'T', 'U', 'V', 'W', 'X', 'Y', 'Z'. The table contains data points for various parameters, with some cells containing 'O' or 'X'.

Virtual Fit Testing

- Developed **virtual fit testing system** using Matlab™ based on results of **OM wearing characteristics** analysis ($n = 23$)
- Applied virtual fitting to other 107 pilots

Analysis of OM wearing characteristics by **photo**

- 23 pilots (MN size)
- Wear angle: 52° (range: 47 ~ 57°)
- Wear position

Analysis of wearing characteristics by **virtual fitting**

- 107 pilots (MN size)

- **Fitness** (pressure or oxygen leaking)
- **Microphone-lip clearance**

Determination of Design Revision Values (Illustrated)

- Determined **numerical values for design revision** through virtual fit testing

direction of design revision

Face-facepiece distance
(design criteria: -2 ~ -6 mm)

revised design
(illustrated)

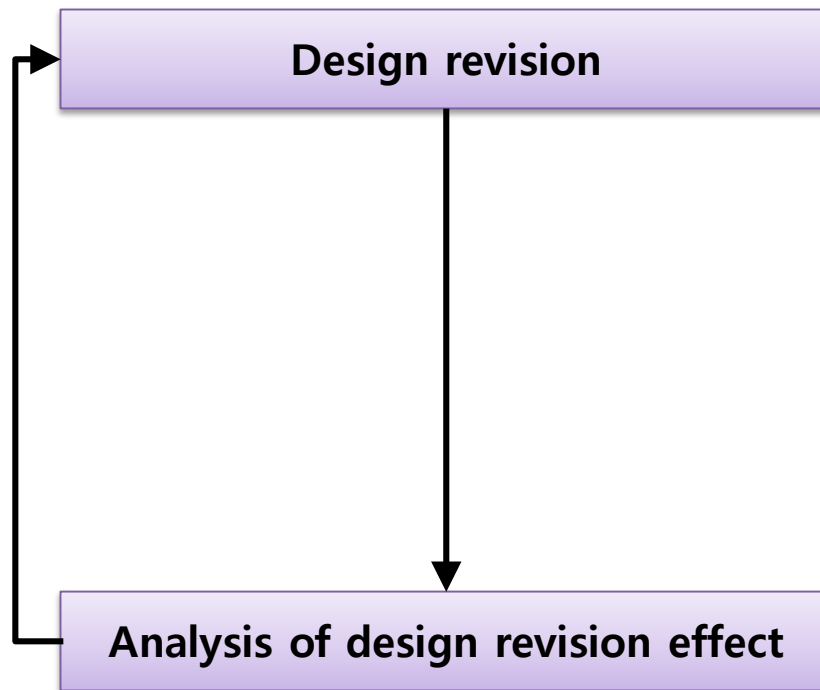

Design Revision – Drawing CAD

- Improvement of OM CAD using Rhino 3D

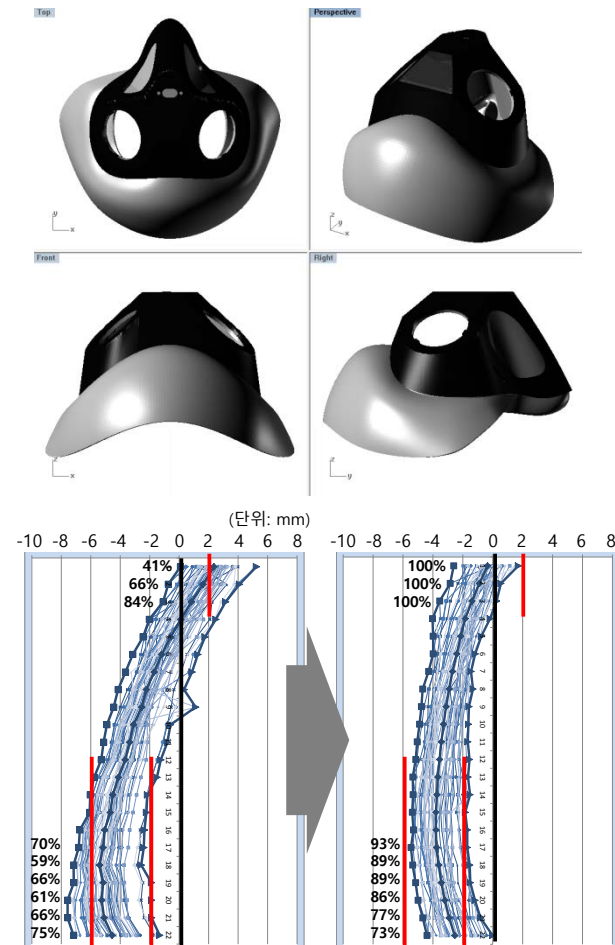

Analysis of Design Revision Effect & Iterative Design

- Analysis of **design revision effect** through virtual fit testing

Concept of iterative design based on virtual fit testing

e.g., analysis of fitness

S4. Evaluation of Revised Oxygen Mask

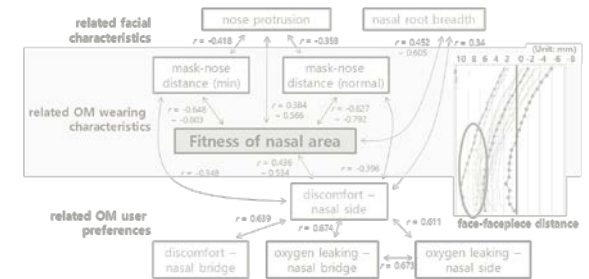

S1 Face-Mask Interface Analysis

- Facial characteristics
- OM wearing characteristics
- OM design dimensions
- OM user preferences

S2 OM Design Strategy Development

- Correlation analysis
- Technical model development
- Design directions determination

S3 OM Design Based on Virtual Fit Testing

- Virtual fit testing method development
- Design revision values determination
- OM design improvement
- Design effect analysis & iterative design

S4 Evaluation of Revised Oxygen Mask

- Virtual fit testing
- Ergonomic experiment

Evaluation of Design Revision Effect by Virtual Fit Testing

(1) Fitness

Nasal bridge
 (design criteria: FF distance = -2 mm)
 Accommodation rate: 41 ~ 84% ⇒ 100%
 Revision effect: 16 ~ 59% fitness ↑
 (oxygen leaking ↓)

Nasal side
 (design criteria: FF distance = 2 ~ 6 mm)
 Accommodation: 59 ~ 75% ⇒ 73 ~ 93%
 Revision effect: 11 ~ 30% fitness ↑
 (pressure ↓)

(2) Microphone-lip contact: 34% ⇒ 100% (revision effect: 66% ↑)

Experiment for Mask Usability Evaluation

Subjective Evaluation

Objective Evaluation

index

Discomfort, oxygen leaking, microphone-lip clearance, overall satisfaction (7-point Likert scale)

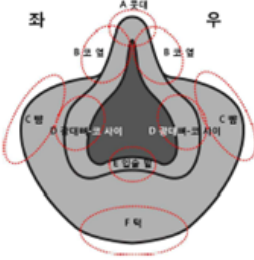

- Pressure
- Oxygen leaking

Example

II. 산소 Mask 적합성 평가

II-1. 착용 안락감 (comfort)

1. 아래 그림을 참고하여 산소 mask 각 부위별 압박에 따른 불편감에 대해 표시해 주세요.

부위	불편 없음 (comfortable)	조금 불편 (lightly uncomfortable)	불편 (moderately uncomfortable)	매우 불편 (very uncomfortable)	극히 불편 (hot spot)
A: 이마	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
B: 코 옆	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
C: 뺨	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
D: 코대입-코 사이	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
E: 입술 밑	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F: 턱	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

2. 산소 mask의 전반적인 착용 안락감에 대해 표시해 주세요.

불편 없음 (comfortable)	조금 불편 (slightly uncomfortable)	불편 (moderately uncomfortable)	매우 불편 (very uncomfortable)	극히 불편 (hot spot)
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

3. 산소 mask 착용 중 말을 할 때, 산소 mask의 전반적인 착용 안락감에 대해 표시해 주세요.

불편 없음 (comfortable)	조금 불편 (slightly uncomfortable)	불편 (moderately uncomfortable)	매우 불편 (very uncomfortable)	극히 불편 (hot spot)
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Questionnaires (illustrated)

Prescale Pressure Indicating Film

Combined Aircrew Systems Tester (CAST)

Evaluation Protocol

S1. Introduction

S2. Evaluation for existing mask

(counter-balanced)

S3. Evaluation for revised mask

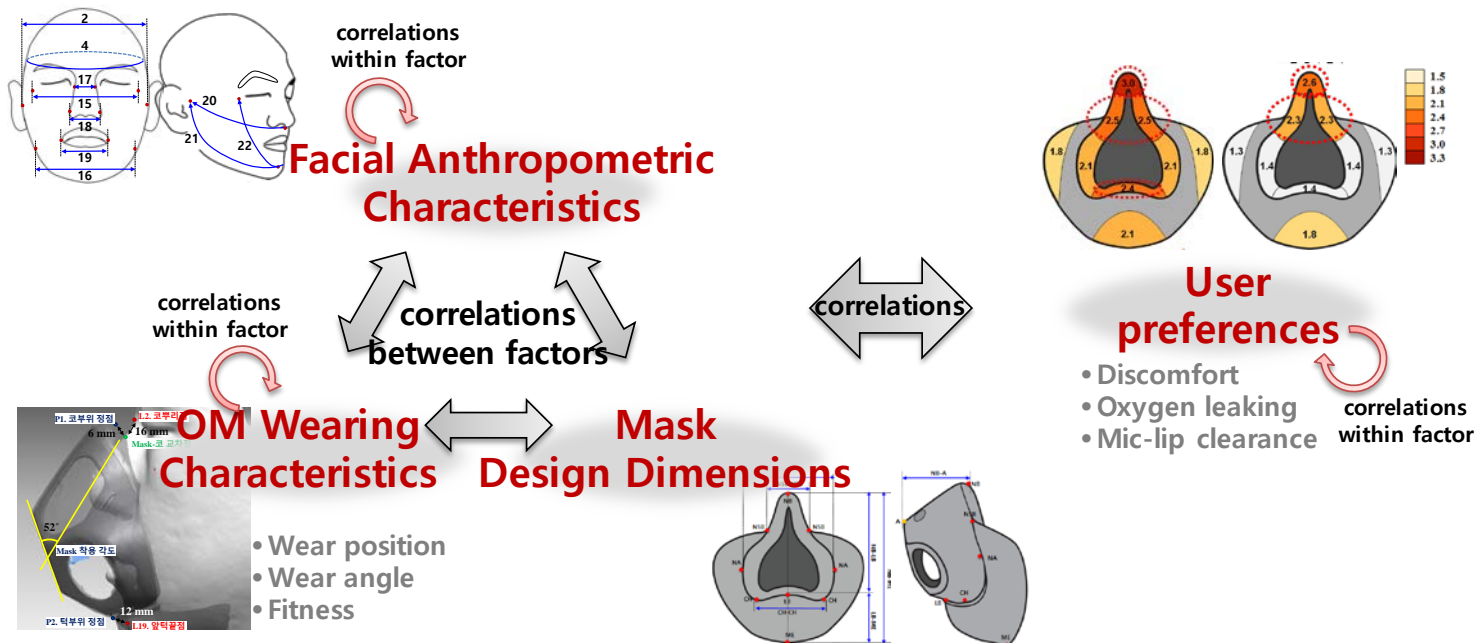

S4. Debriefing

- Questionnaire
- Pressure test
- Oxygen leaking test

Discussion

1. Developed **OM design method** based on **face-mask interface (FMI) analysis**
 - **Systematic method** considering relationships between FMI factors
 - Identified **preferred or non-preferred design features**
 - Developed **virtual fit testing system** based on mask wear characteristics

Discussion

2. Developed **design revision method** based on **virtual fit testing**
 - Identified **numerical values for design improvement**
 - Identified **design revision effect quantitatively**
 - **Iteratively improved** OM design to find better alternatives

3. Revised pilot oxygen mask **to fit to Korean pilots**
 - Evaluated by virtual fit testing
 - ✓ Accommodation rate: 73 ~ 100%
 - ✓ Revision effect: 11 ~ 66%
 - Well-fitness ⇒ no or low pain, no oxygen leaking, safe flight

Further Studies

- Conduct mask wearing experiment with Korean pilots
- Validate the proposed mask design method by usability experiment
- Apply the method to design other size (MW, LW, SN)
- Applicable to design industrial half-face masks (e.g., dustproof mask)

Thank You

Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.
