## AGENDA

- Background
- Objectives of the Study
- Textile Sensibility Evaluation System (TSES)

Ergonomic Design Technology Lab

- Effectiveness Evaluation of TSES
- Discussion

# **Sensibility in Clothing & Textile Design**

Increased customer needs for sensible clothing and textiles.

## **Touch sensibility**

# **Clothing & Textile Sensibility Research**

Chang et al. (2010) suggested
preferred scouring methods (e.g.
enzyme) for naturally colored
organic cotton (NaCOC) fibers by
conducting a visual sensibility
evaluation

 Cho et al. (2001) developed a statistical model which predicts auditory sensibilities of a fabric by using its mechanical and acoustic property information

Sound Sensation	Regression Equation	$\mathbb{R}^2$
Softness	Y =23.873-0.287LPT +0.032EM-0.1682HG +1.050WC-8.328T	0.999
Loudness	$Y = -8.847 - 0.050\Delta L + 0.295 LPT + 5.109T$	0.983
Pleasantness	$Y = 32.599 - 0.001 \Delta f - 1.343 WT$	0.780
Sharpness	$Y = -4.181 + 0.00005\Delta f + 0.128LPT - 4.633G + 12.782T$	0.986
Clearness	$Y = 4.566-0.0001\Delta f + 0.8602HG5$	0.709
Roughness	$Y = -19.796 + 0.0001\Delta f + 0.264 LPT + 0.163 RT - 4.904 G + 22.022 T$	1.000
Highness	$Y = -2.335 - 0.138\Delta L + 0.249 LPT$	0.977
Satisfaction	$Y = 18.914 + 0.048 \Delta L - 0.250 LPT - 4.366T$	0.988

## **Paper & Pencil Questionnaire**

P&P questionnaire: Commonly employed in clothing & textile sensibility research for it is easy to administer and collect evaluation data

Inefficiency in time and manning

- The administrator presents specimens
- Evaluation data are inputted to a computer
- A significant time is needed to analyze the data

Computerized system tailored to textile sensibility evaluation

Treated specimens

Ergonomic Design Technology Lab

# **Objectives of the Study**

6

1. Develop a textile sensibility evaluation system (TSES)

Visual Sensibility Evaluation	on								
	Extreme	-3	-2	-1	0	1	2	3	Extreme
-73	Dark	0	0	0	۲	0	0	0	Bright
TANKA	Ugly	0	0	0	۲	۲	0	0	Beautiful
A me 3	Heavy	Ø	0	0	0	۲	0	0	Light
ST WAS	Dislike	0	0	Ø	0	0	۲	0	Like
	Plain	0	0	0	0	۲	0	0	Showy
Charles States and	Subdued	0	0	0	0	۲	0	0	Vivid
	Typical	0	0	0	0	0	0	0	Special
And a start of the	Static	0	0	0	0	0	0	0	Dynamic
Specimen 1 - 01 triangular fc -	Cheap	0	0	0	0	0	0	0	Luxurious
	Not preferable	0	Ø	0	0	Ø	Ø	0	Preferable

- 2. Examine the effectiveness of TSES
  - Statistical relationships in sensibility evaluation
  - Reliability in evaluation

## **Experiment: Snowflake Patterns**

11 snowflake patterns were selected by a group of experts in clothing and textiles for visual sensibility evaluation

# Triangular formsHexagonal platesBranchestarsStellar platesSplit plates and<br/>starsSectored platesImage: Sectore plates<t

## Selected snowflake patterns

# **Experiment: Visual Sensibility Adjectives & Scale**

10 pairs of bipolar visual sensibility adjectives (Lee & Nam, 2003; Woo & Cho, 2003) with a 7-point scale

No		Very	Moderately	Slightly	Neutral	Slightly	Moderately	Very	+
1	Dark	-3	-2	-1	0	1	2	3	Bright
2	Ugly	-3	-2	-1	0	1	2	3	Beautiful
3	Heavy	-3	-2	-1	0	1	2	3	Light
4	Dislike	-3	-2	-1	0	1	2	3	Like
5	Plain	-3	-2	-1	0	1	2	3	Showy
6	Subdued	-3	-2	-1	0	1	2	3	Vivid
7	Typical	-3	-2	-1	0	1	2	3	Special
8	Static	-3	-2	-1	0	1	2	3	Dynamic
9	Cheap	-3	-2	-1	0	1	2	3	Luxurious
10	Unpreferred	-3	-2	-1	0	1	2	3	Preferred

## **Experiment: Procedure**

- Conducted the visual sensibility evaluation by the test-retest method (at least one day apart)
- Evaluation order: Counterbalanced

## **Effectiveness Evaluation Results: ANOVA**

## □ No significant difference in visual sensibility evaluation by evaluation method

Source	df	SS	MS	F	р

Total	3299	10700.3				

## **Results: Correlation Analysis**

❑ Significantly high correlations (*r* = .88 ~ .97; ρ = .56 ~ .92) between P&P evaluation and TSES evaluation

Visual sensibility	Pearson's	s correlation	Spearman's rank correlation		
	r	p-value	ρ	p-value	
Bright – Dark	.93	<.001	.56	.072	
Beautiful – Ugly	.96	<.001	.88	<.001	
Heavy – Light	.97	<.001	.72	.017	
Like – Dislike	.93	<.001	.79	.004	
Gorgeous – Plain	.95	<.001	.91	<.001	
Vivid – subdued	.88	<.001	.71	.019	
Special – Typical	.95	<.001	.89	<.001	
Dynamic – Static	.96	<.001	.92	<.001	
Luxurious – Cheap	.91	<.001	.76	.007	
Preferred – Unpreferred	.93	<.001	.80	.005	

# **Result: Reliability Analysis**

- Intra-rater SD: P&P Questionnaire > TSES (25% ↓, better reliability in repeated evaluation)
- Inter-rater SD: P&P Questionnaire ≅ TSES (9% <sup>↑</sup>), better discriminability between raters)

**Ergonomic Design** 

**Technology Lab** 

**Inter-rater SD** 

Method		Intra-ra	ater SD		Inter-rater SD					
Method	Mean	SD	Min	Max	Mean	SD	Min	Max		
P & P Questionnaire	0.86	0.14	0.62	1.07	1.21	0.14	1.04	1.50		
System	0.64	0.15	0.33	0.78	1.32	0.10	1.14	1.45		

## **Discussion**

- Developed a textile sensibility evaluation system for efficient administration & data management in terms of time and manning
- □ Found TSES more effective than P&P questionnaire
  - Highly correlated
  - Better reliability in evaluation
  - $\Rightarrow$  Can replace P&P questionnaire
- Future work: Analysis modules
